

## Windows Telix WT3

### Quick Search

Search in Telix is already blazing fast and versatile; we added the quick search feature requested by Telix users to allow easier search for any word within a message.

Quick search is conveniently placed on top of every message catalog and will rapidly search within messages of the specific message catalog.

Use the quick search to find any word in messages, subject, addressee etc. Add more words (i.e. search within a list of found messages) to narrow down to the exact messages you need.

#### Some quick tips:

- To search for messages including a single word somewhere in the subject, email or body of the message, just type the word in quick search and press enter.
- For messages containing two words, not necessarily next to each other but definitely both of the words, type one word next to the other:  
i.e. searching for: **TCT Geared** will include **TCT with steel** and **45k dwt Geared**
- For specific text only, include the word inside quotation marks:  
i.e. **"MV Hamburg"** will include **MV Hamburg** but not **MV Voyager spot Hamburg**
- For partial word search type part of the word followed by an asterisk  
i.e. type **del\*** to search for **dely** and **delivery**
- For messages with any of two words:  
i.e. **med|blsea** to search for messages with either the word **med** or **blsea**

We welcome your ideas and requests for new Telix functionality and usability at [support@lgmar.gr](mailto:support@lgmar.gr)

*WT3 is part of the Telix suite of products, the leading maritime message management system that introduced electronic messaging in shipping.
