iTelixPlus update 1.6
The new iTelix is better, faster, secure and easy to use
It's the perfect companion on the go

We would like to thank Telix users for their positive comments and great ideas. The following are some of the notable features added with iTelixPlus update 1.6:
- iTelixPlus will clearly **mark outgoing** messages to easily distinguish especially in mixed selections and search lists that contain both In/Out messages.

- Tap the title at the top of the screen (i.e. Default) to **refresh** the messages without changing your position in the list. Drag down while at the top of the list, will also refresh your messages.

- Tap & hold the title at the top of the screen (i.e. Default) for **chronological order** (i.e. older messages first). Tap & hold again for the usual recent messages first. Supported in your default list, selections and search results.

- Quick **search** is relevant with **the current message list** you are viewing. While viewing Inbox, quick search will work with incoming messages only, while in Sent with outgoing messages etc. Using quick search in a Selection will search only in messages of the specific selection. Using quick search in the **Default** message list is not restricted and is similar to the search option of your iTelixPlus menu.

- iTelix will take advantage of your device **spelling check** capabilities if these are enabled. Spelling errors are underlined and user may tap on the misspelled word for correction. Specific actions on how to handle spelling errors may vary between different devices. We suggest to take some time to familiarize with your specifics for spelling on your own device.

- **Predictive** text may be a great time saver while writing your message or not sure about the exact spelling. Enable this feature from your device and iTelixPlus will take full advantage of your device capabilities about predictive typing.

- **Auto-Capitalization** will be used by iTelixPlus if enabled in your device. iTelixPlus is using all your device features like **Voice** dictation, Predictive typing, auto-correct, spelling check, text formatting to assist you in creating quickly a correct email message.

- Creating a new message will make available all **To/CC/BCC** fields to make it as easy as possible for the user. Just start typing and address book helpers will automatically suggest relevant recipients. Taping to the body of the message will minimize this area.

- To conserve precious screen space, while writing your message, iTelixPlus will **minimize the recipients** and mark their count in a button. To reveal again all recipients just tap on the button (or anywhere in that area) to fully expand all recipients.

- While viewing an incoming message, large lists of recipients will be minimized to make more screen space available and not obstruct users from viewing the actual message. In case there are minimized recipients their count will be marked in a button. Tap on the button (or anywhere in that area) to magnify the area, expanded with all recipients.

LgMAR is a software company founded by a team of dedicated experts in computer science and maritime business, to develop highly specialized software in the area of telecommunications. LgMAR is recognized as a leading company in communications software with several hundreds of installations and thousands of satisfied users.
